Frequently Asked Questions (FAQs)

Q1: What is the difference between ISO/IEC 17025 and ISO/IEC 17034?

A1: ISO/IEC 17025 focuses on the competence of testing and calibration laboratories, while ISO/IEC 17034 specifically addresses the competence of organizations producing reference materials. While related, they are distinct standards with different scopes and requirements.

Q2: How often do I need to audit my processes against the ISO/IEC 17034 checklist?

A2: The frequency of internal audits should be determined based on risk assessment and the complexity of your operations. However, regular audits are essential to ensure ongoing compliance. An accredited body will also conduct regular surveillance audits to maintain accreditation.

Q3: What if my organization doesn't produce a wide range of reference materials? Do I still need to comply with ISO/IEC 17034?

A3: Yes, even if your organization produces a limited range of reference materials, complying with ISO/IEC 17034 is still crucial for ensuring the quality and reliability of your products and maintaining the integrity of your business.

Q4: What is the role of traceability in ISO/IEC 17034?

A4: Traceability is paramount. It ensures that the assigned values of your reference materials can be linked to national or international measurement standards. This provides confidence in the accuracy and reliability of the measurements made using your RMs. This traceability is a critical aspect of **reference material proficiency**.

Q5: How can I find an accreditation body for ISO/IEC 17034?

A5: Many national accreditation bodies offer accreditation services for ISO/IEC 17034. You can typically find them through a search for "national accreditation body" along with your country's name. The ILAC (International Laboratory Accreditation Cooperation) website is a good resource for locating accredited bodies internationally.

Q6: What happens if I fail an audit against ISO/IEC 17034?

A6: Failing an audit can lead to non-conformities being identified. These non-conformities must be addressed through corrective and preventive actions. Depending on the severity of the non-conformities, it could even result in the suspension or withdrawal of accreditation.

Q7: Is ISO/IEC 17034 mandatory?
