This is a prime example of how the Seminoles leverage readily available resources for medicinal purposes.
- **Yaupon Holly (*Ilex vomitoria*)**: While the name suggests otherwise, this holly is primarily known for its stimulating properties. The Seminoles traditionally used a tea made from its leaves in religious ceremonies and for its stimulating and mild diuretic effects. Understanding the cultural context of these plants is crucial to appreciate their significance.
- **Bloodroot (*Sanguinaria canadensis*)**: This plant's vibrant red sap has long been valued for its antiseptic and anti-inflammatory properties. Seminoles traditionally employed it for skin ailments, wound healing, and as a natural dye. The deep red color is symbolically significant in Seminole culture, further emphasizing the intertwined relationship between the physical and spiritual.
- **Elderberry (*Sambucus canadensis*)**: This versatile

plant's berries, flowers, and leaves possess various medicinal properties. The Seminoles used different parts to address a range of conditions, including colds, flu, and skin infections. The effectiveness of elderberry in combating common illnesses aligns with contemporary research showing its antiviral and immune-boosting qualities.

It is used extensively in ceremonies and for purification rituals. Its aroma is believed to promote healing and spiritual well-being, showcasing how Seminole medicine encompasses physical and spiritual well-being.
