Q3: My Toshiba G25 is running very slowly. What can I do?

A3: Several factors can cause slow performance. Start with a disk cleanup, removing temporary files and unnecessary programs. Check your task manager to see if any programs are consuming excessive resources. Consider upgrading the RAM if possible (see question 2). A malware scan is also recommended. If the problem persists, consider reinstalling your operating system as a last resort.

A5: Check the power adapter and ensure it's securely connected to both the laptop and the power outlet. Try a different outlet to rule out a power problem. If still unresponsive, the problem might be a faulty power adapter, battery, or even a more serious internal hardware failure requiring professional repair.

Q6: What is the best way to back up my data from my Toshiba G25?

A6: Regular backups are crucial. You can use external hard drives, cloud storage services (like Google Drive, Dropbox, or OneDrive), or create system image backups using Windows built-in tools. Regularly backing up prevents potential data loss from hardware failure or other issues.
