FAQ

Q1: Where can I find a manual for my specific Sharp Aquos 37-inch model?

A1: The best place to start is Sharp's official website. Search their support section using your exact model number (e.g., LC-37D62U). You can also try searching online retailers where you purchased the TV, or using a general web search engine like Google, Bing, or DuckDuckGo.

Q2: My Sharp Aquos 37-inch won't turn on. What should I do?

A2: First, check the power cord to ensure it's securely plugged into both the TV and the wall outlet. Try a different outlet to rule out a power issue. Check the power switch on the TV itself. If still not working, it may require professional repair.

Q3: How do I connect my game console to my Sharp Aquos 37-inch?

A3: Most game consoles use HDMI for connection. Locate an HDMI input on your TV and an HDMI output on your console.

Connect them using an HDMI cable. Then, select the correct HDMI input on your TV's remote control.

Q4: My picture quality is blurry. How can I improve it?

A4: First, check the input source and ensure you're using the highest quality connection available (HDMI is preferred over composite or component). Next, adjust the picture settings on your TV (brightness, contrast, sharpness). If using an antenna or cable, ensure you have a strong signal.

Q5: Can I connect my computer to my Sharp Aquos 37-inch?

A5: Yes, you can likely connect your computer using an HDMI cable or, if your computer and TV support it, a VGA cable. Check your computer and TV's available input/output ports.

Q6: My Sharp Aquos 37-inch remote isn't working. What can I do?

A6: Check the batteries in the remote control. Make sure there are no obstructions between the remote and the TV sensor. If possible, try using a different remote or using the buttons on the TV itself. In some cases, re-pairing the remote may be necessary (check your manual for instructions).

Q7: What is the difference between HDMI, component, and composite video inputs?

A7: HDMI is a digital interface providing the highest quality signal, capable of carrying both high-definition video and audio. Component video is an analog interface providing good quality video, while composite video is an older analog interface with lower quality. HDMI is generally preferred when available.

Q8: My Sharp Aquos 37-inch has lines or discoloration on the screen. Is this fixable?
