Common Tillotson HD/HR Carburetor Issues and Solutions

Many problems with Tillotson HD and HR carburetors stem from common issues like clogged jets, worn-out parts, or incorrect adjustments. The service manual will assist in diagnosing and rectifying these problems.

Fuel System Troubleshooting

One of the most frequent issues is related to the fuel delivery system. Problems like a **clogged fuel filter**, a **malfunctioning fuel pump**, or **restricted fuel lines** can all impede proper fuel flow. The manual will guide you in checking fuel pressure, cleaning the filter, and inspecting the fuel lines for any obstructions.

Carburetor Cleaning

Regular cleaning is crucial. Over time, debris and varnish can accumulate within the carburetor, obstructing jets and passages. Your manual will detail the proper procedures for disassembling, cleaning, and inspecting all parts using carburetor cleaner and compressed air.

Pay particular attention to the **main jet**, **pilot jet**, and **idle circuit** which are commonly affected.

Float Level Adjustment

The float level is paramount for proper carburetor function. An incorrectly set float level can lead to either a rich or lean fuel mixture, resulting in poor engine performance or even damage. The manual will specify the correct float level measurement and the procedure for adjusting it. Using the correct tools and paying close attention to detail is crucial here.

Maintaining Your Tillotson Carburetor: Preventative Measures

Preventative maintenance is far more effective and less costly than dealing with major repairs. Regularly servicing your Tillotson HD/HR carburetor will prevent many problems before they arise. Consider these preventative measures:

- **Regular Cleaning:** Schedule regular cleanings, especially if the carburetor is exposed to dusty or dirty environments.
- **Fuel Storage:** Use fresh, clean fuel and avoid storing fuel for extended periods. Old fuel can gum up the carburetor's internal components.

damaged or worn-out components promptly.
