## FAQ: Steel Design Manual 14th Edition

### Q1: What is the difference between LRFD and ASD?

**A1:** Load and Resistance Factor Design (LRFD) and Allowable Stress Design (ASD) are two different approaches to structural design. LRFD is a limit states design method that considers the probability of failure and uses load factors and resistance factors to account for uncertainties. ASD, on the other hand, is a deterministic approach based on allowable stresses and safety factors. LRFD is generally preferred today for its more accurate and realistic assessment of structural safety.
