Understanding Prototrak Age 2 Conversational

Programming

The Prototrak Age 2 stands out for its user-friendly conversational programming interface. Unlike complex G-code programming, the Age 2 uses plain English-like commands. This significantly reduces the learning curve and allows machinists to focus on the task at hand rather than deciphering cryptic codes. The system's strength lies in its intuitive approach, translating simple instructions directly into machine actions. This "conversational" style is a major advantage, making it accessible even to machinists with limited programming experience.

Key Components of Prototrak Age 2 Programs

A typical Prototrak Age 2 program consists of several essential components:

- **Machine Setup:** This initial section defines parameters such as the work offset, tool length compensation, and feed rates. Proper setup is critical for accurate machining.
- **Geometric Definition:** This involves specifying the coordinates of points and the geometry of features to be machined. This often uses simple commands like "GO/TO X Y Z" to move the tool.
- **Cutting Operations:** These instructions dictate the specific machining operations, such as drilling, milling, and turning. Parameters like feed rate, spindle speed, and depth of cut are specified here.
- **Tool Selection:** The program explicitly selects the appropriate tool for each operation, ensuring correct machining performance.
- **Program Termination:** This section signals the completion of the machining process.

Prototrak Age 2 Programming Examples: Practical Applications

Let's look at some practical examples to solidify our understanding. Consider a simple milling operation:

Example 1: Milling a Rectangular Pocket

GO/TO X1.0 Y1.0 Z0.0

GO/TO X1.0 Y2.0 Z-0.5 ;Start of Cut

RAPID X5.0 Y2.0 ;Rapid Traverse

FEED X5.0 Y1.0 Z-0.5 ;Cut in X direction

FEED X1.0 Y1.0 Z-0.5 ;Cut in Y direction

GO/TO X1.0 Y1.0 Z0.0 ;Retract

END

This code snippet demonstrates the simplicity of the Prototrak Age 2 language. Each line corresponds to a specific action, making it easy to follow and modify. Note the use of "RAPID" for faster non-cutting movements and "FEED" for controlled cutting motions.

Example 2: Drilling a Hole

```
***
```

```
GO/TO X2.5 Y2.5 Z0.0
```

```
GO/TO X2.5 Y2.5 Z-1.0 ;Drill to depth
```

```
GO/TO X2.5 Y2.5 Z0.0 ;Retract
```

```
END
```

```
***
```

This exemplifies how straightforward drilling operations can be programmed.
